

Shelved trolleys: Open - Closed - Linkable

The 1-part shelved trolleys are used for the distribution of clean linen. The 2-part can be used for the same and simultaneous collection of dirty linen.

The rugged frame is made of AISI 304 stainless steel (1.4301) completely TIG welded at all joints to avoid water infiltration and dirt collection, ensuring perfect hygiene. Bottom, shelves and dividing wall are made of 18 mm thick wood panels, covered with melamine sheet and with ABS profiles along the edge. The two tubes running above the worktop build a comfortable push handle.

We can also offer different types of shelf trolleys in our range. Please contact your account manager or our customer service to discuss the wider range.
