

Contributing ideas for new concepts together with the customer

CPQ: visualisation of configurations and price quotes

Belintra continues to think along with you as the user. Custom **configuration software** has been developed for this purpose, which enables you to **visualize** quickly how you can use a specific room, taking into account all the possible constraints (windows, headroom, door apertures, utility mains, etc.).

Belintra AIR: a leasing concept to lower the barriers to entry by spreading the investment cost for IT-related and other investments

By spreading the procurement cost in **monthly instalments** - i.e. a different financial approach - this concept becomes very attractive. You can **tackle outdated infrastructure that needs replacing sooner**.

The Belintra AIR concept also offers the possibility of updating the hardware and software component of IT-related products **after a period of 5 years**, while retaining the existing mechanical infrastructure. Since a **residual value** is always taken into account, this is also an **attractive model from a financial viewpoint**.

Safe and innovative logistics solutions for the healthcare sector

Hospital sector

CSSD · OR · Pharmacy · Intensive Care · Accident & Emergency · Nursing station

Residential care homes and Retirement and nursing homes

# and innovative logistics flow through various departments in the health care sector

Belintra, founded in Belgium in 1965, is a leading and innovative supplier of **secure and innovative logistics solutions** for the healthcare sector. In 2017, a new management team was put together to continue to guarantee growth in the years to come.

Belintra develops the necessary infrastructure alongside you, and helps in setting-up the required organisational and logistical processes. We provide **solutions that work optimally for you**.

This encompasses all the storage and transport challenges and safety criteria facing the healthcare sector. These are spread across **all departments**, including nursing, Central Sterile Services Department and Operating Room, pharmacy, intensive care unit as well as linen and waste handling. We also work with **Residential Care Homes**.

## With mobile IT, secure access always and everywhere to electronic patient records

The **computerisation of patient information** and related procedures are becoming increasingly important in the context of accreditation in healthcare. **Locking away** and **secure arrangements** for access to medication are also becoming increasingly important.

Belintra offers different solutions to bring **mobile IT** to the patient and to **safeguard access to medication**. By opting for IT and USB-control, the **unique dual-zone locking system** can be implemented. This enables separate control and monitoring of opiates and other drugs.

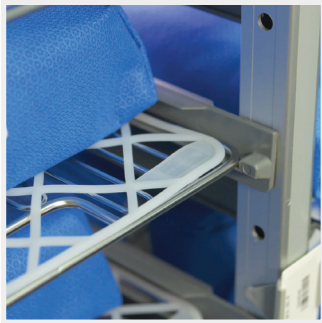

## Transport systems

### Open and closed modular transport trolleys

Open transport trolleys - which can also be supplied with a dust cover - are the simplest solution for efficient **internal transport** between the various departments.

Closed transport trolleys can be used to transport sterile and non-sterile goods **securely and hygienically** from the pharmacy or sterilization department to the user department. Some models of the closed transport trolleys are also suitable for **outdoor transport**.

## Sterisystem® for CSSD and OR

### Maximum infection control

Belintra Sterisystem® provides a **unique sterile logistics flow** and an ideal transport and storage solution, where the risk of contamination due to perforations of packed instrument sets is not only drastically reduced, but according to independent research, reduced to virtually zero.

Moreover, you **optimize the available space and cut costs** due to a better occupation of autoclaves and washers/disinfectors.

**Made to measure, height-adjustable packing tables** also make it possible to work in an ergonomic way.

## Logistics solutions

### Save time through improved organization

By reorganizing the storage room in the CSSD, pharmacy and nursing department, you can **maximize the working space**, making it easier to manage and **optimize the workflow**.

The **structured storage** in UBeFlex® columns or shelves, stainless steel wire shelves or baskets, PC and/or ABS trays and modules enable simple, fast storage of - and access to - the right products in the right quantity at the right time.

With the new **OptiScanBan®** concept you **increase the efficiency** in the restocking of goods in a **Kanban-FIFO** approach. With the new OptiScanBan® **label holders**, the status of the goods can be changed from “available (green)” to “refill (red)” with a simple flip operation. If you also link the necessary **software** to this, the resupply can be **automated as much as possible**.
